PROFESSIONAL SUMMARY

Software engineer with 4+ years building scalable, production-grade systems specializing in AI-powered applications, security automation, and cloud infrastructure. Co-founded quick-commerce startup, leading technical delivery and owning end-to-end backend infrastructure. Strong experience with LLM integration, agentic AI systems, distributed systems, and DevOps practices. Track record of shipping fast in high-ambiguity environments, making technical decisions independently, and achieving 99.99% uptime for production systems. Currently completing MSc in Advanced Computer Science at Leicester (graduating July 2026).

TECHNICAL SKILLS

AI & Machine Learning: LLM Integration, RAG Pipelines, Vector Databases, Agentic AI Systems, LangChain, Multimodal Applications

Backend Engineering: Python, Node.js, TypeScript, REST APIs, Microservices, FastAPI, Flask, Full-Stack Development

Cloud & Infrastructure: AWS (EC2, S3, Lambda, IAM), Docker, Containerization, CI/CD (Jenkins), Cloud Architecture

Databases: PostgreSQL, MongoDB, MySQL, Vector Databases, Database Design, Query Optimization

Tools & Security: Git/GitHub, Linux Systems, OWASP Top 10, Security Automation, RBAC, Grafana, Docker

PROFESSIONAL EXPERIENCE

TechMachinery Labs & Visiminds Technologies

Remote, India

Software Engineering Consultant (Part-Time, University Breaks)

Oct 2023 – Present

- Provide technical consulting on project basis during university holiday periods (summer, Easter, winter breaks), maintaining hands-on AI infrastructure development while pursuing MSc studies.
- Lead backend development for IVY security automation platform, architecting scalable API services integrating multiple vulnerability scanning tools (Nmap, Nikto, Nuclei, TestSSL) with OWASP Top 10 compliance mapping.
- Build agentic AI systems with LLM integration using FastAPI/Flask backends, implementing RAG pipelines and vector database infrastructure for conversational AI applications.
- Develop automated reporting systems with Python, creating data processing pipelines and parsers for multi-tool security analysis and PDF generation.

TechMachinery Labs

Bengaluru, India

Software Development Engineer

Aug 2021 – Sep 2023

- Architected and deployed agentic AI systems with LLM integration from scratch, building end-to-end backend infrastructure with FastAPI/Flask serving production applications with thousands of users.
- Built AI-powered mobile and web applications, integrating vector databases and RAG pipelines for conversational AI systems, optimizing for low-latency inference and scalability.
- Designed and shipped scalable backend APIs using Python and Node.js, achieving 99.99% uptime for distributed cloud systems through robust architecture and automated monitoring.
- Built automated data synchronization system for geographically distributed cloud environments, implementing resilient error handling and recovery mechanisms.
- Collaborated directly with CTO to architect technical solutions, making independent decisions on technology stack, database design (PostgreSQL, MongoDB), containerization (Docker), and cloud infrastructure.

Drogher Technologies Pvt Ltd

Bengaluru, India

Co-Founder & Engineering Lead

Nov 2020 – Mar 2023

- Co-founded quick-commerce startup, owning all technical decisions from architecture to deployment, building scalable microservices backend from zero to production.
- Architected end-to-end backend infrastructure using Node.js and PostgreSQL, implementing RBAC-based access control and secure authentication system.
- Led technical delivery of MVPs in high-ambiguity environment, managing cross-functional teams, making rapid product decisions, and securing incubation training at Great Lakes University.

EDUCATION

University of Leicester

Leicester, UK

MSc Advanced Computer Science – Dissertation: AI-Powered Fashion System

Jan 2025 – Jul 2026

Ramaiah Institute of Technology

Bengaluru, India

B.E. Information Science & Engineering – CGPA: 8.49/10

Aug 2018 – Jul 2022

KEY PROJECTS

IVY - AI-Powered Security Automation Platform | *Python, FastAPI, Docker, OWASP*

- Built end-to-end security automation platform from scratch, integrating multiple scanning tools with AI-driven analysis and automated reporting.
- Architected backend API services, data processing pipelines, and PDF generation system, shipping production-grade code independently.

Agentic AI Systems with LLM Integration | *LangChain, RAG, Vector Databases, FastAPI*

- Architected AI agent frameworks using LangChain and custom tooling, implementing RAG pipelines with vector database integration for context-aware applications.
- Built FastAPI/Flask backends serving LLM inference, optimizing for latency and scalability in production environments.

GAU - Circular Economy Platform | *Node.js, TypeScript, MongoDB, AWS, Jenkins*

- Designed scalable Node.js/TypeScript backend with MongoDB, AWS S3 integration, payment gateway (PayU), RBAC security, and Jenkins CI/CD automation.

ACHIEVEMENTS & RECOGNITION

Winner, hackCOVID by HackerEarth (2020) – First place among 4,500+ competing teams

Winner, OneHack 2020 – Team India international representation

Student Advisory Board Member – Ramaiah Institute of Technology
